REFERENCES

"It was important for Tesco to choose trustworthy partner with Central and Eastern European presence able to provide regional approach. As we do operate the network from single location, having provider with same service quality in each country is one of the key benefits. On top of that, we value single account team for all the countries we do operate making sure, that any service requirement is delivered with the same specification and quality."

Martin Berdych, CEE IT Infrastructure & Operations Manager

Reliable connection, guaranteed savings

The volume of services that we provide to Tesco has been steadily growing since 2005, firstly because of the significant expansion in the Czech Republic, and then in 2011 as a result of Tesco's decision to extend this expansion to other countries in which we operate. Tesco Stores has obtained a unified, guaranteed IP VPN service for its retail chain stores throughout the entire Central and Eastern European region. We are currently supporting 1000 Tesco outlets in this part of Europe.

Tesco Stores has been using our services in the Czech Republic since 2005. In connection with the expanded range of services provided to the retail chain, a continually growing number of stores, branches and warehouses have been added and the volume of services has subsequently increased rapidly. Mutual cooperation in one country was then expanded by implementing an IP VPN network

to include Hungary, Poland and Slovakia. We now serve approximately 15% of all Tesco stores in the world spread across the following CEE countries:

- Czech Republic – 214.
- Hungary – 226.
- Poland – 465.
- Slovakia – 172.

Why our solution?

IP Virtual Private Network (VPN) service enables Tesco to easily and efficiently connect all company stores with a single, private network, thereby significantly reducing operational expenses for dependably running internal company applications. We provide primary and redundant services at each store, and guarantees performance of the network through industry-leading service level agreements.

The network is the backbone for mission critical Tesco data applications such as payment transactions, supply chain and employee information systems. In addition to a regional IP VPN network, we provide Tesco with other mission critical services such as data center collocation, dedicated Internet access, voice and SMS services.

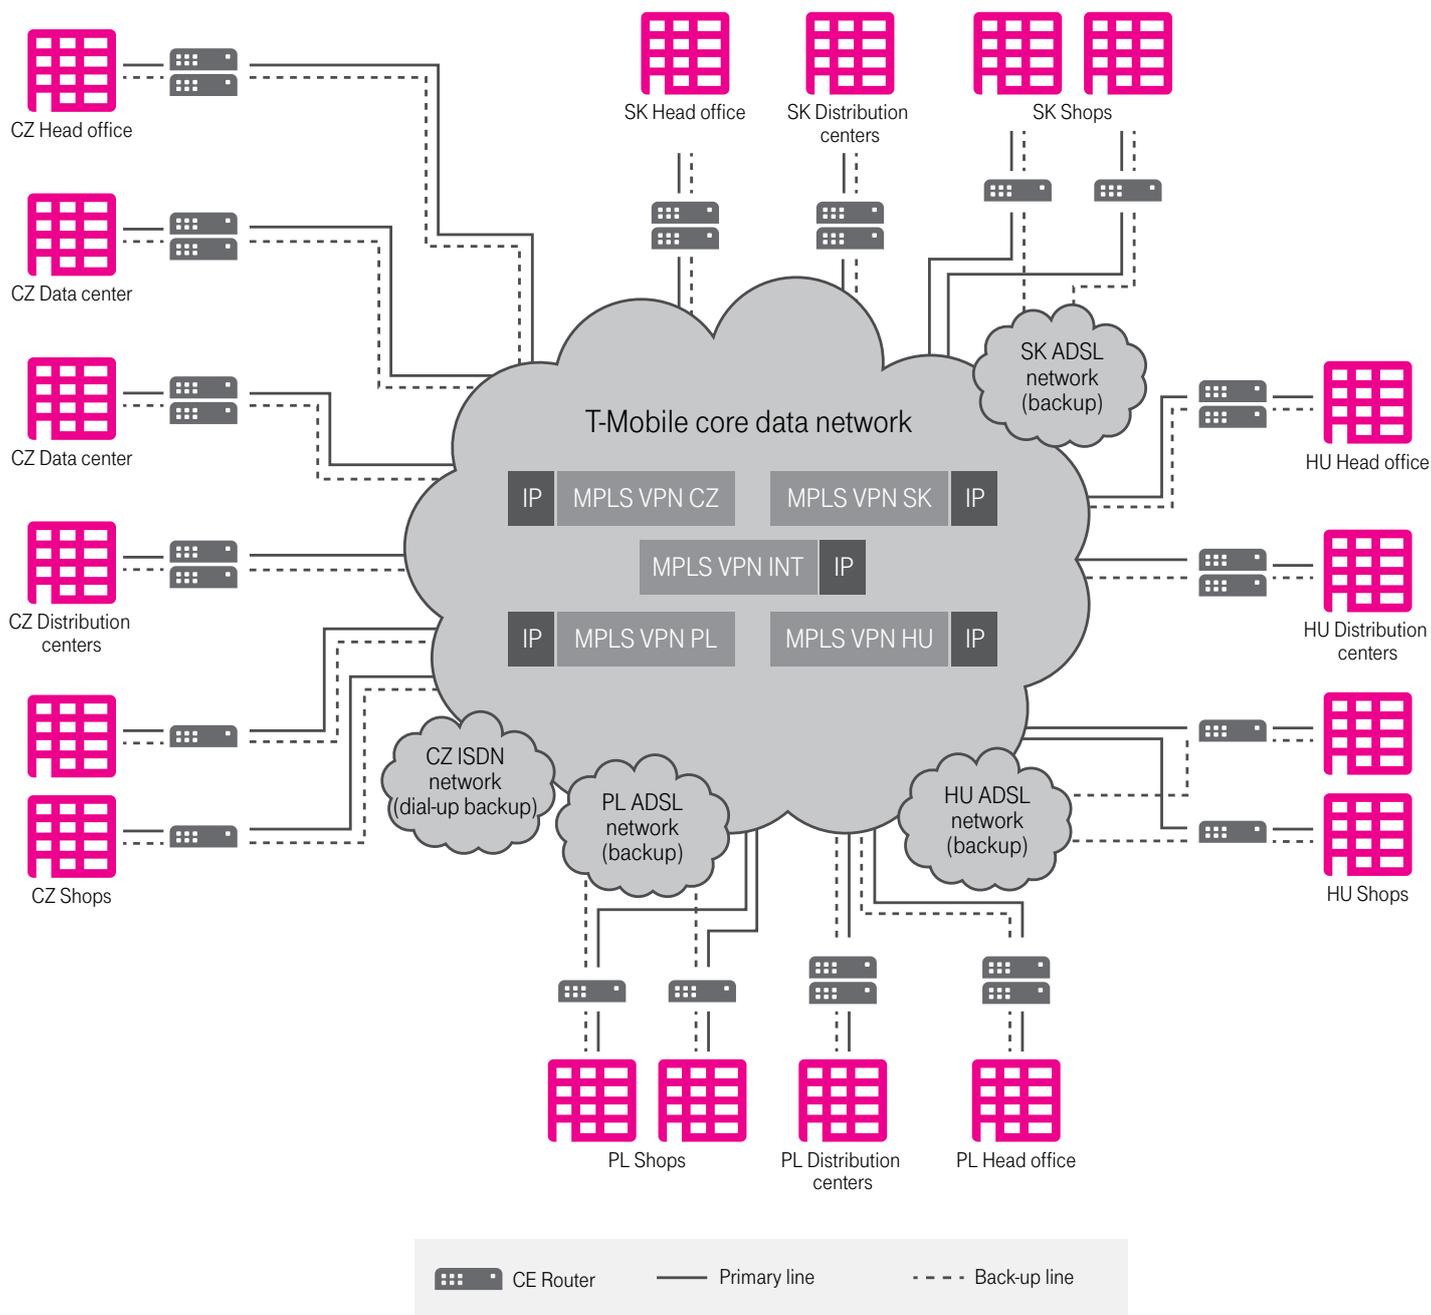

Our Network Advantages

- **A single regional network** – more powerful than individual ones in each country.
- **Lower direct costs** through volume purchasing.
- **Lower indirect costs** as one network is cheaper to operate.
- **Advanced and secure technology** based on IP.
- **Primary and back-up service** at every Tesco store using multiple access methods.
- **Guaranteed QoS** (Quality of Service) and **SLA** (Service Level Agreement).
- **Ability to expand** IP VPN (MPLS) services throughout Europe through partner networks.
- **Extensive product portfolio** to build additional services to be added to the IP VPN network, such as unified communications.

Operational Advantages

- **Centralized and proactive network surveillance and maintenance** within CEE.
- **Multilingual support** across the CEE region.
- **Employees in every country focused on delivering the best service available.**
- **Only one invoice for the region.**
- **Company culture focused on our Customers.**
